Dear Sir or Madam

I worked for more than 10 years (2006 – 2016) in the Financial Sector for NBG Group, but during this decade I was also involved as a freelancer in a wide range of web-oriented projects, having the role of front-end or full-stack developer. Sometimes, I had the role of digital marketing consultant or SEO expert and I was also a seminar speaker for Internet Marketing.

At 31st of December 2016 I leave the bank (with a severance package) - Voluntary Severance

From 2017 until today I worked mostly as a Web Developer (front-end and back-end) for several significant employers and I was lucky enough to deal with many major and interesting projects. During these years I gained experience and I grew my own portfolio.

During my career, more and more I used Content Management Systems, with WordPress being my favorite option for development. I am basically a programmer, having very good knowledge and large hand-on experience in many technologies and languages which are the backbone of CMSs.

I am convinced that I possess the proper qualities and qualifications to respond effectively to the requirements of different kinds of projects.
